Fuse Box Mat

Fuse box Safety mats provide a portable platform for personal protection of employees working near exposed energized breakers, fuses or circuit parts.

1/4" thick switchboard mat, ASTM D178 Class 2 specification, with a maximum use voltage of 17kv, laminated to a 3/8" thick sponge base.

Fuse box Safety Mats are manufactured for personal protective equipment and comfort; they should only be used to offer "temporary" electrical insulation for energized equipment.

Fuse box Safety Mats should not be relied upon solely to provide protection against (electrical) hazards, but should be used in conjunction with engineering safeguards and associated work practices. Overall size 16" x 18", 5/8" total thickness.
